

AMENDMENTS TO THE SPECIFICATION

Please replace paragraph 46 of the specification with the following paragraph:

[0046] The personal computer system 34 includes a microprocessor 36 clocked by a system clock CLK and which is coupled to a high speed or memory bus 38 and to a lower speed or I/O bus 40. The system RAM 42 and ROM 44 are typically coupled to the high speed memory bus, while various peripherals, such as the video display, hard disk drive, Internet interface (often either a modem or an Ethernet connection), and force feedback device, are typically coupled to the slower I/O bus. The microprocessor executes programs stored in the various memories or other computer-readable medium of the computer 34 (RAM, ROM, hard disk, ~~signal-propagated-by-a-carrier-wave, etc.~~) to control, for example, the image display on the video display and the forces provided by the force feedback device. The manufacture and use of computers, such as personal computer 34, are well-known to those skilled in the art.
